Ref: Mag-Boosta fuel conditioner installation – 2014 Hyundai Getz 1.6

Dear Pete

Thank you for installing the Mag-Boosta in a very short period of time to the fuel line of my Hyundai Getz, two weeks ago.

I was very intrigued about the technology and being an engineer myself, I felt I needed to personally verify your claims and at the low cost of the device, I decided to give it a try.

The results were almost immediate, as I could feel the vehicle running a lot smoother and I detected a noticeable reduction in engine noise. Going up hills, the car felt smoother in changing gears and there was a distinct increase in torque, which is surprising, as it is only a 1.6 litre petrol motor.

I have also noticed an improvement in my fuel consumption, as I have decreased the frequency of filling up the tank.

I thoroughly appreciate this new technology, your good, friendly and speedy service and subsequent follow-up.

I can highly recommend your inexpensive products to other vehicle owners.

Your sincerely
G Factor Innovations (Pty) Ltd
