Vehicle : 2002 Toyota Hilux KZTE 3L 4x4 Double Cab

Mileage : 164000 Km

2 x MB1014 Mag Boosta fitted.

Hi Peter,

I am pleased to let you know there have been noticeable improvements in terms of performance, smoke reduction and fuel consumption.

Firstly, I noticed the smoother idling after a few days with using one MB1014 fitted just before the diesel filter. Then the puff of black smoke on start-up and hard acceleration also disappeared within about 2 months or so. (I don't use this vehicle very often)

I also noticed the van seemed to have a bit more power and was more responsive on the open road at higher speed so I started driving it more regularly.

Eventually I decided to fit a second MB1014 between the filter and injector pump.

There was an instant further improvement in performance !

This was when I decided I needed to check if the fuel consumption had improved at all.

Before fitting the Mag Boosta units I think my best I did on a full tank of Diesel was around 500-520Km. I now did over 600Km which is quite an achievement for the old girl.

On another note... I fitted an MB1014 to my Nissan NP200 1.6i 16V Petrol and I could feel an instant improvement in power as soon as I drove out my driveway and hit the road..

This car is super nippy now, gets up to speed a LOT faster, maintains power in high gear a lot easier and just feels as if it has a better engine all round.

Consumption has improved by getting an extra 70km on a 60 litre tank.

Cheers,
Wayne.

20%!
