Ref: Mag-Boosta fuel conditioners

Peter

Further to your request for feedback, I am pleased to write to you regarding our experience with your Mag-Boosta fuel conditioners.

Late in 2021 you introduced me to the technology and fitted a model MB-1014B to our 2015 VW 2.0 litre TDI Caddy panel van (220 000 kms) in a few short minutes. I was impressed at the vast improvement on both top end and engine torque. Unfortunately, I did not take note of the fuel consumption figures before the installation.

In February I decided to also equip our works bakkie, a 2007 Toyota Hilux D4D 3.0 litre turbo with 520 000 kilometers on the clock, with one of your model MB-1620B units. The bakkie has a total of 140 litres tank capacity and beside regular town work, it is used for a single long distance round-trip each week.

Besides more "get up and go" even when fully loaded and pulling a heavy trailer, I was very pleased to see the bakkie's fuel consumption improve from 7 kms/litre to 8.3 kms/litre.

That's just on 19% increase in tank range ! Using the current fuel price and knowing the cost of the Mag-Boosta, our Return-On-Investment was in the order of 3 weeks. Annual savings from here on, *for just the Hilux*, will be approximately R24 000.

With a total of five Mag-Boosta units fitted for various members of our team, we congratulate you on a great South African product that delivers more than you promised. Thank you.

Best regards

Philip Miller
