**Subject:** Re: Mag-Boosta results

Hi Pete

The Chevy is a '54 pickup truck, with a 350 cubic inch (5.7 litre) motor running about 375 + horsepower. In other words, it is a hot rod.

As far as the improvement is concerned, I can feel a difference in power and just general running. It starts easier, idles a little higher and seems to have more punch.

I may drive it another once or twice before putting it to bed for the winter. I do know the motor intimately, as I did most of the engine build myself. As for mileage, well that is a little hard to do at the best of times, as I do put my foot in it just for shits and giggles. However, I have noticed it seems to be more responsive since fitting the Mag-Boosta. I have not touched the carb or the timing at all since I put it on. This thing has a pretty hefty cam in it, so that can be misleading, but I can tell you that it is just more responsive when I hit the gas.

I think I am getting a cleaner burn too, as the plugs look better. I did not check them all, but what I saw seems to bear the evidence of a thorough burn. Plus, I notice the tires 'chirp' quite easy and that would be improved fuel burn

I'm looking forward to receiving the other Mag-Boostas from you. Thanks, Pete.

Neil.
